# Geo-location and D-STAR

## Situational Awareness Brought to Fruition

# Pete Loveall AE5PL

- First licensed 1971
- Computers since 1970
- First ham digital 1973 (RTTY)
- Author/developer of javAPRSSrvr 2002
- Author/developer of D-PRS 2005

# D-STAR DV

- Digital **VOICE**
- 4800 bps bit stream
- After header, continuous 96 bit segments
- 72 bits to AMBE voice and FEC
- 24 bits to “low speed data” – NO FEC, FCS
  - Signaling
  - Synchronization
  - Undefined

# Icom Low Speed Data

- Icom defined usage
- Front panel “message” display
- Low speed (less than 1200 bps) serial data

# Icom Serial Data

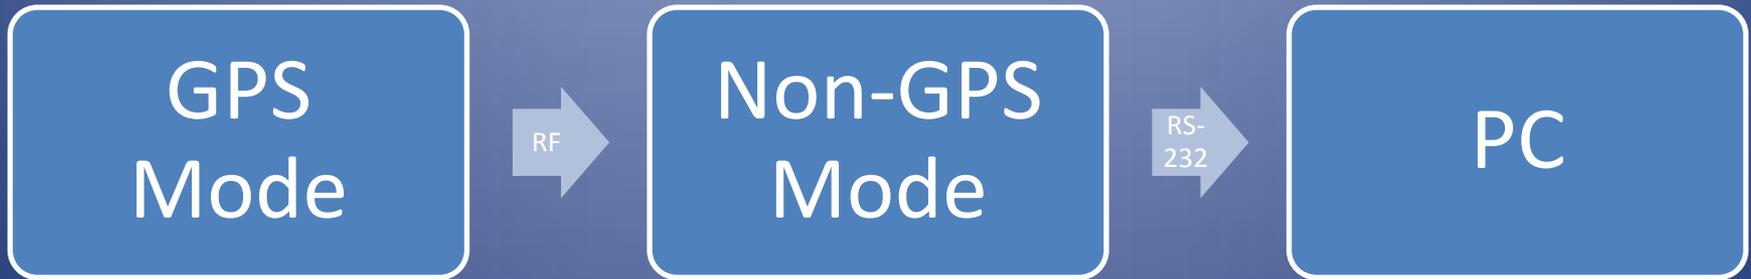

- External Asynchronous Data
- Internal GPS
  
- BOTH use the exact same format

# Icom GPS Modes

- Original: GPS Mode
  - No inherent error detection
  - NMEA GPS strings followed by callsign and front panel message
- GPS-A Mode
  - APRS TNC2 format with CRC wrapper
  - Not displayed on Icom radios

# Simple Icom Geo-location

# Special Notes

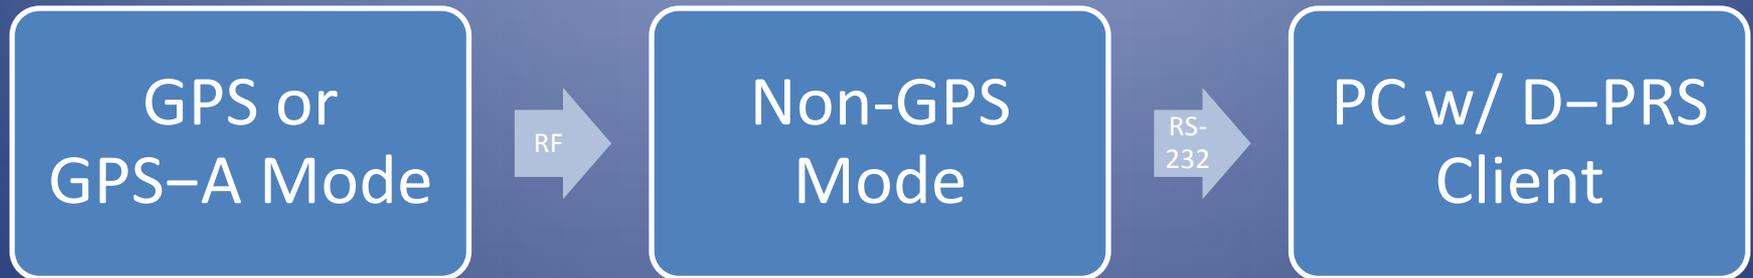

- NO protocol error correction or detection
  - Must be supplied by application
- NO messaging
- ADJUNCT to voice
  - Must coexist and give priority to voice
- NOT intended for tracking
- Continuous transmission with PTT depressed

# D-PRS

- Icom GPS to APRS Translation
- Specification, Not Protocol
- Supports GPS and GPS-A modes
- Uses GPS-A CRC wrapper to facilitate APRS-APRS client communications

# Simple Icom Geo-location

# D-PRS

- APRS mapping clients
- APRS-IS gateways
- D-STAR client support (D-RATS)
- APRS messaging over D-STAR DV

# D-PRS IGates

- Standalone
- D-STAR Gateway Collocation

# Requirements

- GPS Mode:
  - Mandatory message configuration
  - <http://www.aprs-is.net/dprscalculator.aspx>
- GPS-A Mode:
  - APIInna,DSTAR\* UNPROTO
  - nna is defined at <http://www.aprs-is.net/dprs.aspx>

# Be Heard

- Simplex does not require special RPTR settings
- Repeater use (repeater not linked):
  - URCALL = CQCQCQ
  - RPTR1 = Local repeater call including ID (K5TIT B)
  - RPTR2 = Local gateway call including ID (K5TIT G)

# Don't Interfere!

- Never beacon on a linked repeater
- Only beacon on a repeater with prior permission
- Never beacon on a repeater if active on voice (either you or the repeater is active)

# Situational Awareness

- EVERY time you transmit, you send your position
- Active voice net, Net Control sees everyone's position when they transmit
- No interference or wasted net time trying to describe your location

# Quick, Tell Me Where You Are!

# APRS vs. D-PRS

- APRS
  - Tracking
  - Messaging
  - Informational
  - Normally, multiple radios, possible interference
- D-PRS
  - Situational Awareness
  - Voice network adjunct
  - Single, non-interfering radio

# Final Thoughts

- Be considerate
- Be considerate
- Listen
- Listen
- Listen
- Be prepared

# Q&A
